

What is an RSS feed?

RSS stands for Really Simple Syndication.

An RSS feed is simply a list of items, each containing a headline, description, and a link to a web page. Websites provide RSS feeds so you can subscribe to their content and receive updates automatically

News feeds allow you to see when websites have added new content. You can get the latest headlines and video in one place, as soon as it's published, without having to visit the websites you have taken the feed from.

Feeds are also known as RSS. There is some discussion as to what RSS stands for, but most people plump for 'Really Simple Syndication'. In essence, the feeds themselves are just web pages, designed to be read by computers rather than people.

How do I start using feeds?

In general, the first thing you need is something called a news reader. This is a piece of software that checks the feeds and lets you read any new articles that have been added. There are many different versions, some of which are accessed using a browser, and some of which are downloadable applications. Browser-based news readers let you catch up with your RSS feed subscriptions from any computer, whereas downloadable applications let you store them on your main computer, in the same way that you either download your e-mail using Outlook, or keep it on a web-based service like Hotmail.

Once you have chosen a news reader, all you have to do is to decide what content you want it to receive. For example, if you would like the latest FSP News, simply visit the FSP blog and you will notice an orange button on the right hand side.

If you click on the RSS button you can subscribe to the feed in various ways, including by dragging the URL of the feed into your news reader or by cutting and pasting the same URL into a new feed in your news reader. Most sites that offer feeds use a similar orange button, but some may just have a normal web link.

Some browsers, including Firefox, Opera and Safari, automatically check for feeds for you when you visit a website, and display an icon when they find one. This can make subscribing to feeds much easier. For more details on these, please check their websites.

How do I get a news reader?

There are a range of different news readers available and new versions are appearing all the time. Different news readers work on different operating systems, so you will need to choose one that will work with your computer.

You can also use your outlook as a reader however this may depend on the version you have.

If this is an option for you, all you need to do is:

- Find the RSS feed in outlook
- Click 'Add new RSS feed'
- Enter the URL for the relevant feed
- Click add

This will then be added to your list of RSS feeds
